

# FAST CYCLE ROUTES

PROVINCE NOORD - BRABANT

## Map Matching

Map Matching is solving the problem of recorded geographic coordinates to a logical model of the real world.

Using the Map Matching technique it becomes easy to determine the bicycle movements between two locations on the map. We used QGIS to visualize all the data points.

Which bicycle routes should the City of Tilburg consider turning into a fast cycle route?

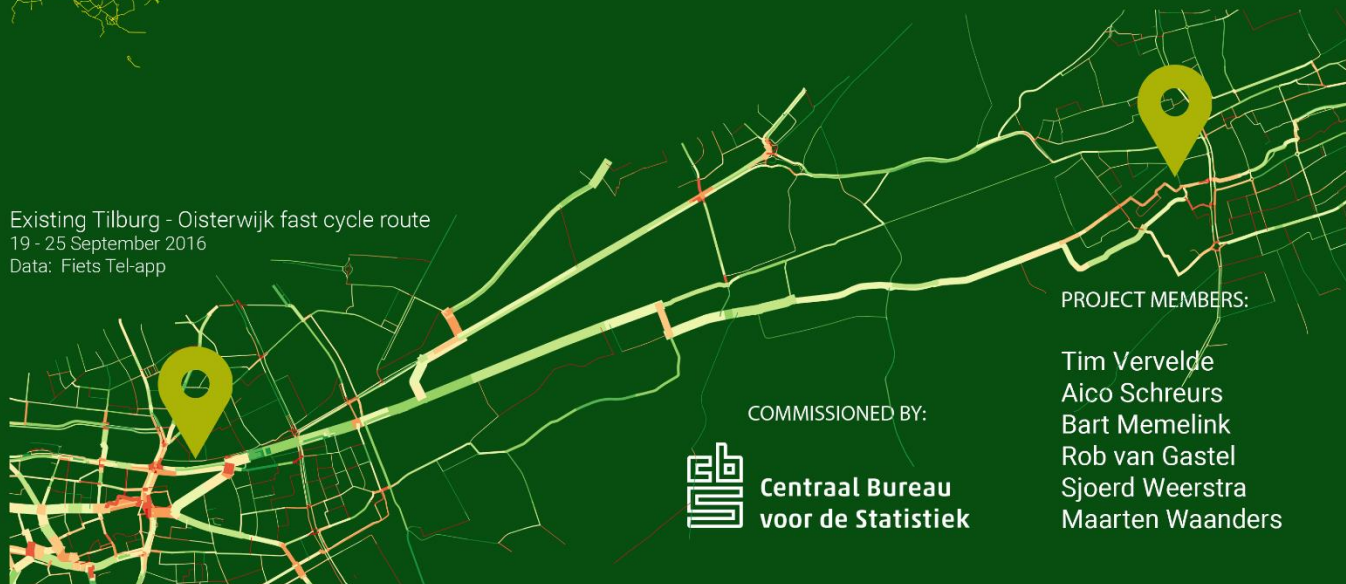

Our project goal is to find the most suitable routes that can be optimized into fast cycle routes.

## What are fast cycle routes?

- + Optimized bike routes with fewer obstacles
- + Safe and accessible to everyone
- + E-bike ready

Existing Tilburg - Oisterwijk fast cycle route  
19 - 25 September 2016
