Country comments  
Countries may add comments to explain their national data in the specified "Comments" column. If you add a comment, please specify whether it refers to a specific year's entry only or to the entire time-series (unless self-evident).  
In particular, comments should be inserted for any major operation, for any operation reported in rows d) and h) of Part 1 or rows d), g) and k) of Part 2, as well as for every case for which the difference between the assets of year T from assets of year T-1 differs significantly from the value of transactions for year T.

## INSTRUCTIONS

(See also the Instructions for the completion of the supplementary table on government interventions to support financial institutions).

1. This table relates to government activities undertaken to directly support financial institutions. It should not include support measures for non-financial institutions or general economic support measures (for example, changes in social benefits or changes in tax rates).

2. Interest payable includes accrued interest, where relevant, and imputed interest on financing (see the Instructions for details).

3. The appropriate valuation for all entries in part 2 is nominal value, except for ordinary quoted shares, which should be recorded at market value, ordinary unquoted shares which, where possible, should be valued in line with ESA 2010 §§7.73-7.79 and debt securities held as assets, where market value should be used, provided that an active market exists and the market value can be reliably determined. In Council Regulation 479/2009, as amended, the nominal value is considered equivalent to the face value. The face valuation of certain debt instruments, notably deposits and various types of bonds, is further specified in chapter VIII.2 of the Manual on Government Deficit and Debt – ESA 2010 implementation. Reporting of debt in foreign currency and revaluation effects should follow the rules in ESA 2010 and Reg. 479/2009. Footnotes may also be used if needed.

4. The liabilities rows show impact on government debt from the activities to support financial institutions. Apart from cases of direct borrowing, by convention, for the liabilities entries, it is assumed that there is a direct impact on government debt from activities, which imply a transfer of cash from government (e.g. transfer of cash relating to capital injections, loans granted, purchase of financial assets). In addition, imputed financing costs should be included.

By default, liabilities not financed through a dedicated instrument ("indirect liabilities", i.e. liabilities deemed to be financed through the general financing policy of government) are reported in the row "debt securities". The amount of indirect liabilities may be noted in the voluntary detail row "of which indirect liabilities".

A liability should be reported as long as the corresponding asset (assumed to be financed by it) is held by a government unit or as soon as a corresponding capital transfer operation takes place. Borrowing (with the intention to finance a support operation) in a financial period prior to the one when the operation actually takes place should not be recorded as a liability in the table before the actual support operation takes place.

5. The rows 'Other assets / liabilities of general government entities' include the assets and liabilities of entities reclassified into general government or the assets and liabilities of newly established government defeasance structures. In this case care should be taken to avoid counting the debt effect of the rate of financing twice (see the Instructions for details). As regards defeasance structures, the total assets are reported in the table, but only the liabilities included in Maastricht debt are reported in the liabilities row of the table. Non-financial assets of a defeasance structure should be valued independently using a commonly accepted method for assets of their type. The rows can also contain assets and/or government debt type of liabilities that do not fit on the other lines. In case the rows are used a country footnote should be added with an explanation.

6. Guarantees covered are those granted by general government to non-general government units. Reported guarantees do not include guarantees on bank deposits, or guarantees on the liabilities of special purpose entities included below (in row j). Only the value of active guarantees should be included and not the announced ceilings for schemes. They also includes guarantees on assets, whereby government would incur a liability in case of a call.

7. Liquidity schemes included here are those where the government securities used are not recorded as government debt (see the Eurostat Decision and accompanying guidance note for details). By convention, they are recorded in part 2 as "contingent liabilities outside the general government", as for guarantees, though it should be noted that the exposure of government is likely to be limited.

8. Special purpose entities included here are those where government has a significant role, including a guarantee, but which are classified outside the general government sector (see Eurostat's Decision and accompanying guidance note for details). Their liabilities are recorded outside the general government sector (as contingent liabilities of general government).

9. Indirect liabilities: liabilities corresponding to interventions whose financing cannot distinguished from the government's general financing policy.

10. Regarding Deposit Guarantee Funds (whether in general government or not), only compensation operations directly financed by Government (over and above the amount paid from the Deposit Guarantee Fund's reserves) are included in the table. Other transactions of Deposit Guarantee Funds (i.e. the contributions paid to the Fund by the financial institutions) and those compensations paid by the Fund's reserves or third sources (e.g. borrowing on the market) do not constitute government interventions to support financial institutions and are not reported in the table.
