1. Introduction

CBS Microdata Services provides, under [certain conditions](#), access to the microdata (de-identified data at person-, company- and address level) for statistic and scientific research.

This document gives a short description of the SHARE (Survey of Health, Ageing, and Retirement in Europe) Netherlands dataset, hosted by CBS, and how it can be used within the Remote Access / On Site environment of CBS.

The SHARE Netherlands (SHARE NL) dataset is available in a form that it can be linked at person level to other person related data in the CBS Microdata Catalogue, by using the file KOPPELCBS_SHARENL. Researchers interested in using the SHARE NL dataset within this environment are requested to contact CBS Microdata Services through micodata@cbs.nl.

2. Procedure

CBS Microdata Services facilitates the possibility to merge the SHARE NL survey data with the de-identified CBS data files. The CBS Microdata Services hosts a copy of the SHARE NL data for the participants who have given their consent for this linkage, KOPPELCBS_SHARENL.

There is a two-step procedure to apply for access to the linked SHARE data at CBS:

1. Read the SHARE Conditions of Use at www.share-project.org carefully and if you agree to them, sign and return the SHARE User Statement (if not done before) to the address on that website.
2. Send an e-mail to the Dutch Country Team Leader, dr. Adriaan Kalwij at A.S.Kalwij@uu.nl to ask for access to the linked data.

When access can be granted, you will be contacted by CBS Microdata Services to agree on the access rights and payment. The analyses that researchers can pursue will take place within the regular Remote Access / On Site environment of BS Microdata Services. Therefore the usual formalities, procedures and costs apply. To inform about the costs and the available data in the CBS Catalogue, we advise you to contact microdata@cbs.nl in advance.

2.1 Citation requirements

The results based on the data are published in the researcher's or research institute's own name. A reference is required to be included to both SHARE and CBS.

SHARE:

For citation requirements of SHARE, please see <http://www.share-project.org/data-access/citation-requirements.html>

The reference to CBS concerns exclusively the non-public, linked micro data at CBS. The reference should be worded as follows.

CBS, Dutch version:

"Resultaten [gedeeltelijk] gebaseerd op eigen berekeningen [naam onderzoeksinstelling, c.q. opdrachtgever] op basis van niet-openbare microdata van het Centraal Bureau voor de Statistiek betreffende SHARE Nederland welke afkomstig zijn van SHARE Central."

CBS, English version:

"Results based on calculations by [name of research institution or commissioning party] using non-public microdata from Statistics Netherlands."

"Under certain conditions, these microdata are accessible for statistical and scientific research. For further information: microdata@cbs.nl."

3. Description of the data

3.1 SHARE Netherlands

SHARE Netherlands is the Dutch implementation of the Survey of Health, Ageing, and Retirement in Europe (SHARE). The aim of the research is to study population ageing in Europe. The survey is collected by face-to-face¹, computer-aided personal interviews (CAPI) among individuals aged 50 years and older, and their partners. SHARE is a multinational and multidisciplinary panel database of micro data on health, socio-economic status and social and family networks.

SHARE covers 27 European countries and Israel. The first wave was collected in 2004 and since then, the survey has been fielded every two years. In the third wave in 2008-2009, the retrospective SHARELIFE survey was introduced. SHARE became the first European Research Infrastructure Consortium (ERIC) in 2011.

For more information about SHARE, please see <http://www.share-project.org/>.

3.2 Structure of the data files

The SHARE survey consists of several parts. First, the household information is gathered from one person in the Coverscreen. Then, the main questionnaire is asked at the target person, and his or her partner. The main questionnaire consists of about 20+ modules, with some alterations by wave.

3.3 Content of the data files

The SHARE Netherlands data package consists of a set of data files organized by module. Not all respondents need to answer all modules. In Wave 5, the respondents were asked for their consent for the data linkage with CBS data (see question LI006_Consent). The SHARE data can be linked to CBS microdata, by using the NL_mergeid_crypt form the share files with the corresponding the rinpersoons and rinpersoon from the file KOPPELCBS_SHARENL, only for those individuals which consented to this question. All files are in CSV format.

¹ With the exception of the Dutch Wave 6 and 7, which were conducted as web surveys. In Wave 6, a small group also responded via telephone.

KOPPELCBS_SHARENL variable overview

Nr	Variable	Format
1	NI_mergeid_crypt	A32
2	RINPERSONS	A1
3	RINPERSON	A9
4	Geslacht	A1
5	Geboortejaar	A4
6	Geboortemaand	A2
7	Postcode4	A4
8	Jaarvangeldigheid	A4
9	Peildatum	A8

On the SHARE project website, the full questionnaire is available per wave and per country. In addition to the Dutch questionnaire, the English generic questionnaire can be found here. Please note that some questions are country specific and may not be identical in the generic and Dutch versions. The questionnaire is available at:

<http://www.share-project.org/data-documentation.html>

The file *sharew5_rel6-1-0_nl_dropoff* was an empty file and is not available in the RA environment.
