1 Introduction

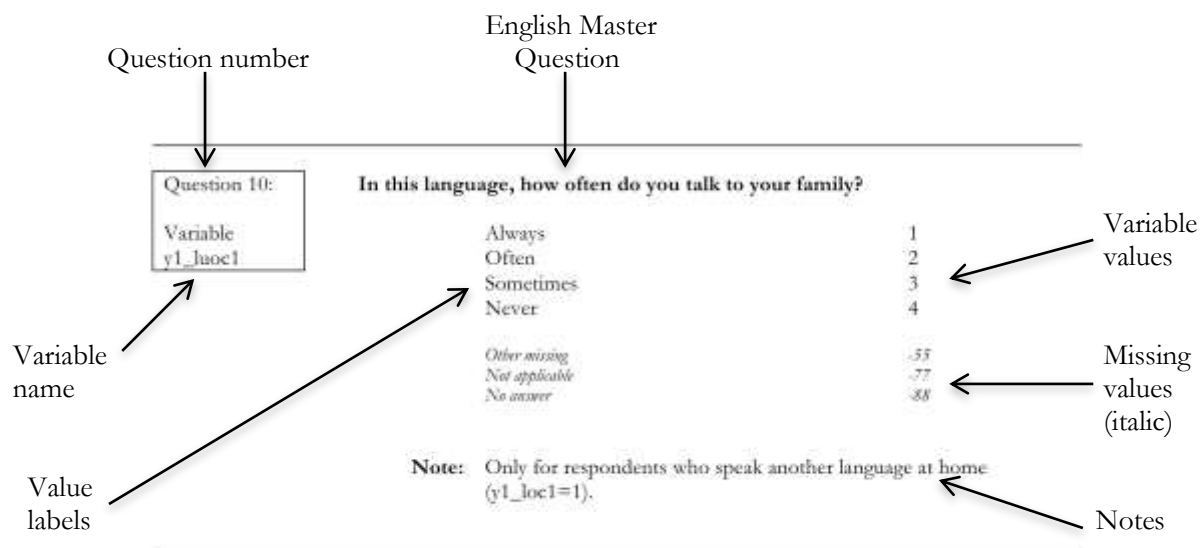

This codebook offers a complete documentation of the third wave of data collected in the “Children of Immigrants Longitudinal Survey in Four European Countries” (CILS4EU). An overview of the different data sets is given in the table below. The data sets can be merged using the unique identifier variable `youthid`.

Part	Version	England	Germany	Netherlands	Sweden
Youth main	Full	w3_ym_en_v3.3.0.dta	w3_ym_ge_v3.3.0.dta	w3_ym_nl_v3.3.0.dta	w3_ym_sw_v3.3.0.dta
	Reduced	w3_ym_en_v3.3.0_rv.dta	w3_ym_ge_v3.3.0_rv.dta	w3_ym_nl_v3.3.0_rv.dta	w3_ym_sw_v3.3.0_rv.dta
Youth friends	Full	w3_yf_en_v3.3.0.dta	w3_yf_ge_v3.3.0.dta	w3_yf_nl_v3.4.0.dta	w3_yf_sw_v3.3.0.dta
	Reduced	w3_yf_en_v3.3.0_rv.dta	w3_yf_ge_v3.3.0_rv.dta	w3_yf_nl_v3.4.0_rv.dta	w3_yf_sw_v3.3.0_rv.dta

For each data set, a reduced version and a full version exist. A comparison between these two versions can be found in Appendix F.

The structure of the codebook is oriented to the data structure, including separate subsections for the different data sets.

Section 2 provides an overview of all variables: ordered by topic (section2.1) and ordered according to how they appear in the data set (section2.2). By clicking on the page number on the right-hand side in the digital version, information about this variable can be retrieved:

Negative values indicate different types of missing values:

Code	Label	Description
-99	Don't know	Only if this option was provided in the questionnaire
-88	No answer	No box ticked/no answer given
-77	Not applicable	Not answered due to filter question
-66	Question not asked	Not asked in a country/mode
-55	Other missing	Answers that could not be coded, fun answers
-44	Interrupted Interview	Only for telephone and online modes
-33	Not available in reduced version	Answers not available in the download version

Notes contain further specificities for the respective variables. In general, the following information can be found in the notes:

- Question was not asked in one or more countries.
- Question was not asked in one or more modes.
- Question was not asked due to filter question.
- Further variables closely related to the variable.
- Variable is not included in the reduced version of the data set.
- Multiple answers are possible.

In general, all variables reflect questions included in the questionnaires. However, several adaptations were necessary, which can pertain to the following procedures and which can be identified by a certain ending of the variable name:

1. Generated variables (variable name ending with G)

Example: The generational status variable `y3_generationG` was generated using information provided by the child about his or her country of birth and age upon arrival as well as information provided in the parental interview about the biological parents' countries of birth as well as the grandparents' countries of birth.

2. Country-specific variables (variable name ending with CS)

Example: Due to divergent educational systems in the four CILS4EU countries, categories for idealistic educational aspirations differ sharply between countries. Therefore, a country-specific variable `y3_edasp1CS` is included in the data set that contains a total of 20 categories for every answer possibility in the four countries.

3. Harmonized variables (variable name ending with H)

Example: Idealistic educational aspirations `y3_edasp1H` were harmonized for England, Germany, the Netherlands and Sweden. This means that educational degrees were made comparable in the respective harmonized variables by combining several categories. The harmonized variable distinguishes "no degree", "degree below upper secondary school", "degree from upper secondary school and "university". Original answers are still available in the country-specific variables (see above).

4. Reduced-version variables (variable name ending with RV)

Example: Complete information on the respondent's mother's concrete country of birth `y3_cobm` is not available in the reduced version of the data. Instead, we offer a reduced version of this variable `y3_cobmRV`, which distinguishes whether the respondent's mother was born in the survey country or not. This variable is also included in the full version of the data.

3 Tracking data set

The tracking data set provided for CILS4EU contains general sampling identifier information on school, class and student level as well as information on implicit and explicit stratification criteria used during the sampling process (stratum, school type and regional information).

Additionally and most importantly, the data set contains information about the participation status of every student attending one of the randomly selected classes in participating schools in wave 1, thus being part of the student gross sample. The participation status variables furthermore distinguish between different modes of participation as well as – where available - reasons for non-participation. Please be aware that this detailed information is available only for some countries, thus, refusal rates cannot be compared across countries.

6.3 Appendix F: Differences Between Full-Version and Reduced-Version

Due to data security reasons, two different versions are available for each data set: (1) a version with complete information collected during the survey (full version) and (2) a version in which specific information was reduced and aggregated in order to prevent the identification of single respondents (reduced version).

The structure of the full version and the reduced version of the data set is identical. This means that in both versions the same variables are included, but the variables encompass different information depending on the version of the data set. Variables with reduced or aggregated information are marked with an “RV” at the end of the variable name.

In the following overview, the differences between the full version and the reduced version of the data are listed.

1 Introduction

This codebook offers a complete documentation of the third wave of sociometric data collected in the “Children of Immigrants Longitudinal Survey in Four European Countries” (CILS4EU) in the Netherlands. The structure of the codebook is oriented to the data structure.

Section 2 provides an overview of all variables. By clicking on the page number on the right-hand side in the digital version, information about this variable can be retrieved:

Negative values indicate different types of missing values:

Code	Label	Description
-88	No answer	No box ticked/no answer given
-77	Not applicable	Not answered due to filter question
-66	Question not asked	Not asked in a country/mode
-55	Other missing	Answers that could not be coded, fun answers

Notes contain further specificities for the respective variables. In general, the following information can be found in the notes:

- Question was not asked due to filter question.
- Further variables closely related to the variable.

In general, all variables reflect questions included in the questionnaires. However, several adaptations were necessary, which can pertain to the following procedures and which can be identified by a certain ending of the variable name. The name of those generated variables ends with G.

Example: The variable y3_nnomineeG was generated using information from all nominations in the data set. If a student has never been nominated by any other student, this is indicated by this variable.

A short note

Following the original survey design of CILS4EU the first two waves of the study were set to be conducted in the school context (if possible), followed by a third wave based on in-home interviews. Consequentially, sociometric classroom network data could originally be collected in the first two waves only.¹ For a subsample of respondents in the Netherlands, however, the third wave took again place in the school context, providing the possibility for a further sociometric wave. The Dutch part of the data therefore extends beyond the original survey design of CILS4EU and includes an additional third wave of sociometric data for those being again surveyed in the school context in wave 3.

Please note the following when using this data: Given that the additional wave of sociometric information is not an actual part of the CILS4EU survey design, we only provided basic preparation of the data, including recoding of self-nominations and double nominations, as well as several flag variables that provide information about the nomination behavior. Further, it is unclear to what extent compositional variation in the survey units occurred across waves. Changes in the nomination possibilities across waves therefore might have occurred, potentially undermining the longitudinal character of the data.²
