

General description of the codebook

The codebook offers a complete documentation of the data collected in the fourth wave of the “Children of Immigrants Longitudinal Survey in the Netherlands” (CILSNL). CILSNL is a continuation of the cross-national project “Children of Immigrants Longitudinal Survey in Four European Countries” (CILS4EU). Information about the sampling procedure, fieldwork, and response can be found in the Technical Report.

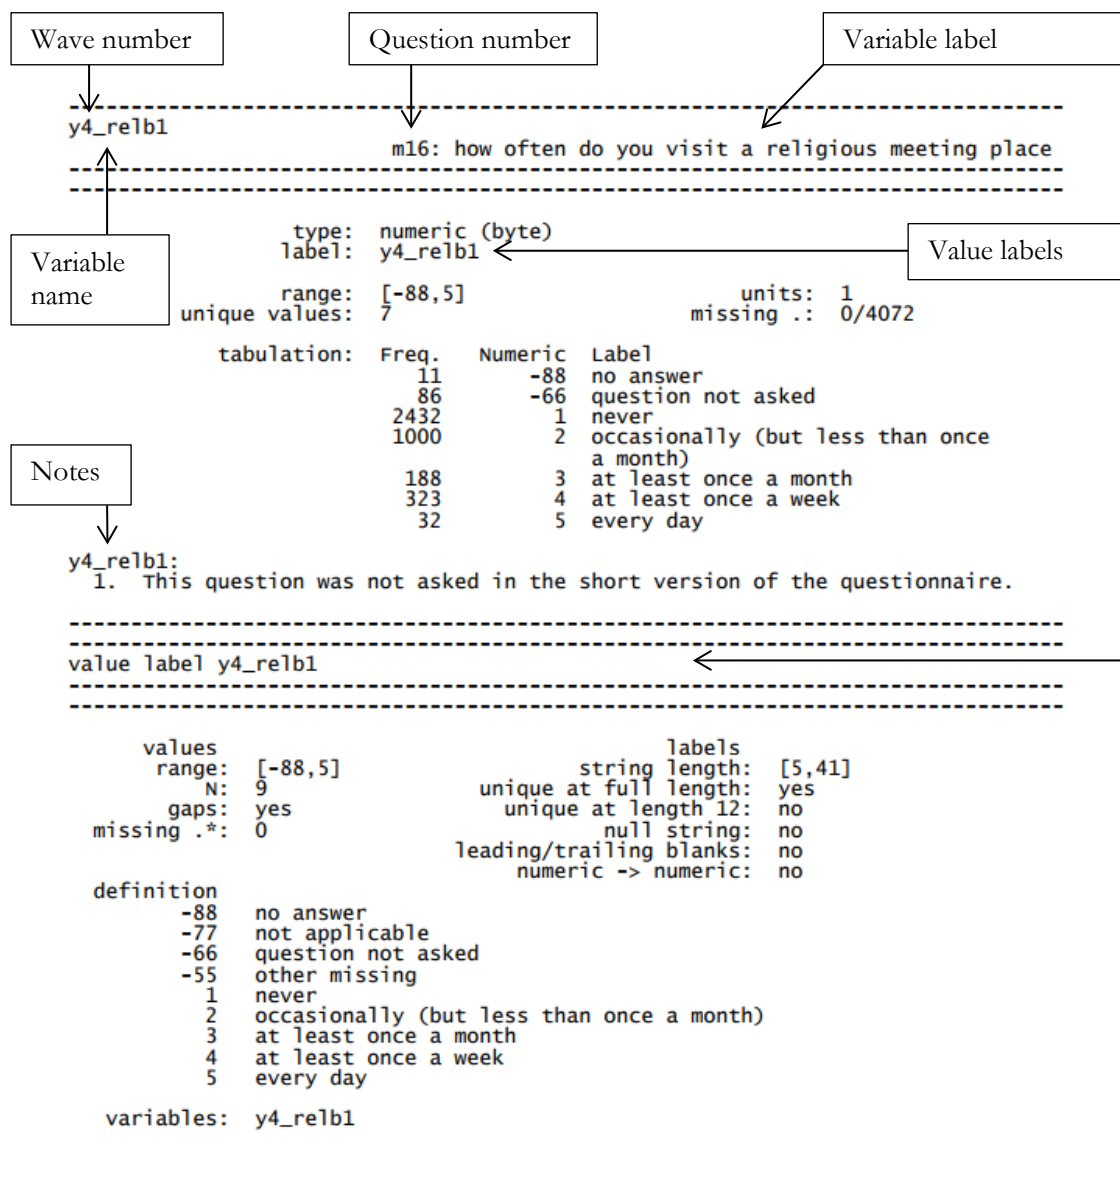

Data from different waves can be merged using the unique identifier variable `youthid`.

Part	Version	
Youth main	Full	w4_ym_nl_v4.0.0.dta
	Reduced	w4_ym_nl_v4.0.0_rv.dta

Due to data security reasons, two different versions are available for each data set: (1) a version with complete information collected during the survey (full version) and (2) a version in which specific information was reduced and aggregated in order to prevent the identification of single respondents (reduced version).

The structure of the full version and the reduced version of the data set is identical. This means that in both versions the same variables are included, but the variables encompass different information depending on the version of the data set. Variables with reduced or aggregated information are marked with an “RV” at the end of the variable name.

The structure of the codebook is oriented to the data structure. The codebook describes each variable and presents the corresponding value label.

Variable labels, in principle, represent the English translation of the Dutch survey question. In some cases, variable labels had to be truncated to fit within the 80-character maximum. For the original Dutch formulation of the question, please consult the questionnaire.

Negative values indicate different types of missing values:

Code	Label	Description
-99	Don't know	Only if this option was provided in the questionnaire
-88	No answer	No box ticked/no answer given
-77	Not applicable	Not answered due to filter question
-66	Question not asked	Not asked in the short version of the questionnaire
-55	Other missing	Answers that could not be coded, fun answers
-33	Not available in reduced version	Answers not available in the reduced version

Notes contain further specificities for the respective variables. In general, the following information can be found in the notes:

- Question was not asked in one or more modes.
- Question was not asked due to filter question.
- Other variables closely related to the variable.
- Variable is not included in the reduced version of the data set.
- Multiple answers are possible.

In general, all variables reflect questions included in the questionnaires. However, several adaptations were necessary, which can pertain to the following procedures and which can be identified by a certain ending of the variable name:

1. Generated variables (variable name ending with G)

Example: The international socio-economic index of occupational status variable `iseiG` was generated using information provided by the child about his or her occupation, and constructed from ISCO 2008 using the conversion tool by Ganzeboom and Treiman¹.

2. Harmonized variables (variable name ending with H)

Example: Idealistic educational aspirations `edasp1H` were harmonized for England, Germany, the Netherlands and Sweden in CILS4EU. This means that educational degrees were made comparable in the respective harmonized variables by combining several categories. The harmonized variable distinguishes “no degree”, “degree below upper secondary school”, “degree from upper secondary school and “university”. Original answers are still available in the original non-harmonized variables. This variable was retained also in the CILSNL data.

3. Reduced-version variables (variable name ending with RV)

Example: Complete information on the respondent’s place of birth `pob` is not available in the reduced version of the data. Instead, we offer a reduced version of this variable `pobRV`, which distinguishes whether the respondent was born in the survey country or not. This variable is also included in the full version of the data.

-55 other missing

variables: y7_backf2dRV

```

```

* pvz, 2017-08-30: to save time, and since this is not a file that will be released to the
* public, we first run the codebook command for all variables, and thereafter
* the labelbook command for all variables that have a value label, so that this
* can be provided to CBS.
